COURSE DETAILS

UNIT I: NUMBER SYSTEM

1. REAL NUMBERS

(16 Periods)

- 1. Review of representation of natural numbers, integers, rational numbers on the number line. Representation of terminating / non-terminating recurring decimals on the number line through successive magnification. Rational numbers as recurring/ terminating decimals. Operations on real numbers. i.e Ex.1.1, 1.3, 1.4, 1.5, 1.6
- 2. Examples of non-recurring/non-terminating decimals. Existence of non-rational numbers (irrational numbers) such as, and their representation on the number line. Explaining that every real number is represented by a unique point on the number line and conversely, viz. every point on the number line represents a unique real number.
- 3. Definition of nth root of a real number.
- 4. Rationalization (with precise meaning) of real numbers of the type and (and their combinations) where x and y are natural number and a and b are integers.
- 5. Recall of laws of exponents with integral powers. Rational exponents with positive real bases (to be done by particular cases, allowing learner to arrive at the general laws.)

UNIT II: ALGEBRA

1. POLYNOMIALS

(23) Periods

Definition of a polynomial in one variable, with examples and counter examples. Coefficients of a polynomial, terms of a polynomial and zero polynomial. Degree of a polynomial. Constant, linear, quadratic and cubic polynomials. Monomials, binomials, trinomials. Factors and multiples. Zeros of a polynomial. Motivate and State the Remainder Theorem with examples. Statement and proof of the Factor Theorem. Factorization of $ax^2 + bx + c$, $a \neq 0$ where a, b and c are real numbers, and of cubic polynomials using the Factor Theorem.

Recall of algebraic expressions and identities. Verification of identities and their use in factorization of polynomials. i.e Ex. 2.1, 2.2, 2.3, 2.4, 2.5

2. LINEAR EQUATIONS IN TWO VARIABLES

(14) Periods

Recall of linear equations in one variable. Introduction to the equation in two variables. Focus on linear equations of the type ax+by+c=0. Explain that a linear equation in two variables has infinitely many solutions and justify their being written as ordered pairs of real numbers, plotting them and showing that they lie on a line. Graph of linear equations in two variables. Examples, problems from real life, including problems on Ratio and Proportion and with algebraic and graphical solutions being done simultaneously. i.e Ex.4.1, 4.2, 4.3

UNIT III: COORDINATE GEOMETRY

COORDINATE GEOMETRY

(6) Periods

The Cartesian plane, coordinates of a point, names and terms associated with the coordinate plane, notations, plotting points in the plane. **Ex. 3.1,3.2, 3.3**

UNIT IV: GEOMETRY

1. INTRODUCTION TO EUCLID'S GEOMETRY (Not for assessment) 6) Periods

History - Geometry in India and Euclid's geometry. Euclid's method of formalizing observed phenomenon into rigorous Mathematics with definitions, common/obvious notions, axioms/postulates and theorems. The five postulates of Euclid. Equivalent versions of the fifth postulate. Showing the relationship between axiom and theorem, for example:

(Axiom) 1. Given two distinct points, there exists one and only one line through them. (Theorem) 2. (Prove) Two distinct lines cannot have more than one point in common.

i.e Introduction

2. LINES AND ANGLES

(13) Periods

- 1. (Motivate) If a ray stands on a line, then the sum of the two adjacent angles so formed is 180O and the converse.
- 2.If two lines intersect, vertically opposite angles are equal.

- 3. (Motivate) Results on corresponding angles, alternate angles, interior angles when a transversal intersects two parallel lines.
- 4.(Motivate) Lines which are parallel to a given line are parallel.
- 5. The sum of the angles of a triangle is 1800.
- 6. (Motivate) If a side of a triangle is produced, the exterior angle so formed is equal to the sum of the two interior opposite angles. i.e Ex. 6.1, 6.2

3. TRIANGLES (20) Periods

- 1. Motivate Two triangles are congruent if any two sides and the included angle of one triangle is equal to any two sides and the included angle of the other triangle (SAS Congruence).
- 2. Motivate Two triangles are congruent if any two angles and the included side of one triangle is equal to any two angles and the included side of the other triangle (ASA Congruence).
- 3. (Motivate) Two triangles are congruent if the three sides of one triangle are equal to three sides of the other triangle (SSS Congruence).
- 4. (Motivate) Two right triangles are congruent if the hypotenuse and a side of one triangle are equal (respectively) to the hypotenuse and a side of the other triangle. (RHS Congruence)
- 5. The angles opposite to equal sides of a triangle are equal.
- 6. (Motivate) The sides opposite to equal angles of a triangle are equal.
- 7. (Motivate) Triangle inequalities and relation between 'angle and facing side' inequalities in triangles.

i.e Ex. 7.1

4. QUADRILATERALS

(10) Periods

- 1. Prove The diagonal divides a parallelogram into two congruent triangles.
- 2. (Motivate) In a parallelogram opposite sides are equal, and conversely.
- 3. (Motivate) In a parallelogram opposite angles are equal, and conversely.
- 4. (Motivate) A quadrilateral is a parallelogram if a pair of its opposite sides is parallel and equal.
- 5. (Motivate) In a parallelogram, the diagonals bisect each other and conversely.
- 6. (Motivate) In a triangle, the line segment joining the mid points of any two sides is parallel to the third side and in half of it and (motivate) its converse. i.e Complete introduction of parallelogram along with mid point theorem.

5. AREA (7) Periods

Review concept of area, recall area of a rectangle.

- 1. Parallelograms on the same base and between the same parallels have equal area.
- 2. (Motivate) Triangles on the same base (or equal bases) and between the same parallels are equal in area. i.e, Introduction

6. CIRCLES (15) Periods

Through examples, arrive at definition of circle and related concepts-radius, circumference, diameter, chord, arc, secant, sector, segment, subtended angle.

- 1. Equal chords of a circle subtend equal angles at the center and (motivate) its converse.
- 2. (Motivate) The perpendicular from the center of a circle to a chord bisects the chord and conversely, the line drawn through the center of a circle to bisect a chord is perpendicular to the chord.
- 3. (Motivate) There is one and only one circle passing through three given non-collinear points. 4. (Motivate) Equal chords of a circle (or of congruent circles) are equidistant from the center (or their respective centers) and conversely.
- 5. The angle subtended by an arc at the center is double the angle subtended by it at any point on the remaining part of the circle.
- 6. (Motivate) Angles in the same segment of a circle are equal.
- 7. (Motivate) If a line segment joining two points subtends equal angle at two other points lying on the same side of the line containing the segment, the four points lie on a circle.
- 8. (Motivate) The sum of either of the pair of the opposite angles of a cyclic quadrilateral is 180° and its converse. **Ex. 10.1, 10.2**

7. CONSTRUCTIONS

(10) Periods

1. Construction of bisectors of line segments and angles of measure 600, 900, 450 etc., equilateral triangles.

UNIT V: MENSURATION

1. AREAS (4) Periods

Area of a triangle using Heron's formula (without proof) and its application in finding the area of a quadrilateral. **Ex. 12.1**

2. SURFACE AREAS AND VOLUMES (12) Periods

Surface areas and volumes of cubes, cuboids, spheres (including hemispheres) and right circular cylinders/cones. **Introduction of all formula's**

UNIT VI: STATISTICS & PROBABILITY

1. STATISTICS

(13) Periods

Introduction to Statistics: Collection of data, presentation of data — tabular form, ungrouped / grouped, bar graphs, histograms (with varying base lengths), frequency polygons. Mean, median and mode of ungrouped data. **Ex. 14.1**

2. PROBABILITY

(9) Periods

History, Repeated experiments and observed frequency approach to probability. Focus is on empirical probability. (A large amount of time to be devoted to group and to individual activities to motivate the concept; the experiments to be drawn from real - life situations, and from examples used in the chapter on statistics). **Ex. 15.1**

Annual Syllabus

Book: Text book for class IX NCERT

Unit No.	Unit		Marks
1.	Matter - Its Nature and Behavior		20
2.	Organization in the Living World		20
3.	Motion, Force and Work	15	
4.	Natural Resources (Environment, Food production)		15
	Total		70
	Internal assessment		30
	Grand Total		100

Theme: Materials

Unit I: Matter-Nature and its behavior

Chapter 1: Matter- nature and behavior.

Definition of matter, Characteristic of matter, state of matter solid, liquid and gas, change of state, Evaporation

Chapter2: Is matter around us is pure:

What is a mixture? What is Solution? Separating the components of mixture, Physical and chemical changes.

Chapter3: Atoms and molecules, Law of Chemical Combination, what is atom? What is molecule, Writing Chemical Formulae?

Chapter4: Structure of atoms: charged Particles in matter, Structure of atom, How do Electrons distributed in different orbits, Valency, Atomic Number and Mass Number, Isotopes and Isobars.

Theme: The World of the Living

Unit II: Organization in the Living World

Chapter 5: The fundamental Unit of life: what are living organisms made up of? What is Cell made up of?

Chapter 6: Tissues: Plant tissues animal tissues and plant tissues

Theme: Moving Things, People and Ideas

Unit III: Motion & Force

Chapter 8: Motion: Describing Motion measuring the rate of motion, rate of change of velocity, uniform circular motion.

Chapter 9: Force and Newton's laws: Newton's Laws of Motion, first law, Inertia and mass, second law of motion, third law of motion.

Chapter 10: Gravitation: Gravitation, mass, weight, Archimedes's principle.

Theme: Natural resources: Balance in Nature

Unit IV: Our environment

Chapter 13: Why do we fall ill?

Health and its failure, Diseases and causes

Chapter 15: Improvement in food Resources: Improvement in crop yields, Animal Husbandry.

PRACTICALS

Practical should be conducted alongside the concepts taught in theory classes. (LIST OF EXPERIMENTS)

- 1. Preparation of:
 - a. a true solution of common salt, sugar and alum
 - b. a suspension of soil, chalk powder and fine sand in water
 - c. a colloidal solution of starch in water and egg albumin/milk in water and distinguish between these on the basis of
 - Transparency
 - Filtration criterion
 - Stability
- 2. Perform the following reactions and classify them as physical or chemical changes:
 - a. Iron with copper sulphate solution in water.
 - b. Burning of magnesium ribbon in air.
 - c. Zinc with dilute sulphuric acid.
 - d. Heating of copper sulphate crystals.
 - e. Sodium sulphate with barium chloride in the form of their solutions in water
- 3. Preparation of stained temporary mounts of (a) onion peel, (b) human cheek cells & to record observations and draw their labeled diagrams.
- 4. Determination of the melting point of ice and the boiling point of water.
- 5. Verification of the Laws of reflection of sound.
- 6. Determination of the density of solid (denser than water) by using a spring balance and a measuring cylinder.
- 7. Establishing the relation between the loss in weight of a solid when fully immersed in:
 - a. Tap water
 - b. Strongly salty water with the weight of water displaced by it by taking at least two different solids.
